BSA Sunbeam & Triumph Tigress Scooter 1959-1965 Workshop Manual Nov 20 2021 184 pages, and more than 120 illustrations and charts, size 8.25x10.75 inches. This manual is a compilation of three factory publications including the owner's instruction manual, the parts/spares manual and a set of service sheets. These publications cover all three variations of the 175cc two-stroke and the 250cc four-stroke and electric start models manufactured from 1959-1965. Neither BSA nor Triumph ever published a workshop manual for these models, however, the combination of these three publications provides the most comprehensive maintenance and repair information that was ever made available from the manufacturer. **MANUALS & TECHNICAL PUBLICATIONS:** Maintenance, repair and service information was issued under both the BSA and Triumph name. However, as the machines were identical in all aspects, any technical documentation can be applied to either manufacturer without hesitation. **SERVICE SHEETS:** Beginning in December 1959, both BSA and Triumph began publishing repair, overhaul and technical information in the form of individual (dealer only) "Service Sheets". It should be noted that it was never intended that these service sheets would be distributed to the general public. However, they were eventually combined into a single publication and released under both the BSA and Triumph names, the contents being identical in either case. **INSTRUCTION MANUAL:** Both BSA and Triumph published an identical "Instruction Manual" the only difference being the name on the front cover. These publications were somewhat more detailed than typical "owner's manuals" as they included overhaul information in addition to general maintenance and adjustments. As these instruction manuals were included with each new scooter purchased, there were a number of "editions" published during the lifetime of the model, however, the contents remained basically unchanged. When combined with the "Service Sheets" they are a reasonable substitute for a workshop manual. **PARTS (or) SPARES MANUAL:** The parts manuals are also identical and include exploded component diagrams that are extremely helpful in the rebuilding or restoration process. **ADDITIONAL DATA:** There is an addendum to the rear of this manual that contains a number of communications that were sent from the UK factory to their US distributors. These documents are somewhat rare and they may be of help in assisting in the maintenance of one of these machines. **DESIGN & GENERAL SPECIFICATIONS:** Designed by Edward Turner (Triumph) and sold under both BSA and Triumph brand names to take advantage of established distribution networks, this badge engineering was one of the last uses of the Sunbeam name. The differences between the BSA Sunbeam and Triumph Tigress were entirely cosmetic—the former in polychromatic green paint, also two-tone red and cream, with a BSA badge; the latter in a shell blue or mimosa and ivory (two-tone) with a Triumph badge. Introduced in late 1959, the scooter was available with a 250 cc four-stroke twin (10hp), or 175cc two-stroke single cylinder engine (7.5hp). Both engines were forced-air-cooled. The two-stroke was a development of the BSA Bantam engine but the four-stroke was a completely new parallel-twin with a gear drive to the gearbox. The contact-breaker fed two separate ignition coils, each of which connected directly to its own spark plug without the need for a distributor. Drive to the rear wheel was by a fully enclosed chain in an oil bath. Both versions had four, foot-operated gears. Some of the 250 twins were fitted with an electric starter and a 12 volt (not 6 volt) electrical system, they were identified as either B25 (Sunbeam) or TW25 (Triumph). The 250 cc four-stroke model was discontinued in 1964 and the 175cc two-stroke model in 1965.

Siegecraft Mar 13 2021 The "Parangelmata Poliorcetica" and the "Geodesia," two Greek treatises on the construction of devices for siege warfare, are products of 10th-century Byzantium. The texts are presented here in critical editions based, for the first time, on the archetype manuscript Vaticanus graecus 1605 and accompanied by an English translation and commentary. The illustrations, reproduced in this edition, go beyond the traditional ground plans of the time and show elevations to represent finished devices in action.

BSA D14 Bantam Workshop Manual & Instruction Manual Nov 08 2020 158 pages, and more than 130 illustrations and charts, size 8.25 x 10.75 inches. This publication is a compilation of two original BSA factory manuals, Workshop Manual (part number 00-4152) and Instruction Manual (part number 00-4140). Both of these manuals are identified by the factory as appropriate for the 4 speed D14/4 Supreme, Sports and Bushman models that were introduced in August 1967. However, this manual hits the "sweet spot" of the 4 speed Bantam series, as both the earlier D10 Sports and Bushman 4 speed models (1966 to 1967) and the later D175 (1969 to 1971) share many of the same design attributes and mechanical components. For information on the earlier 1948 to 1966 models, the BSA Bantam "Service Sheet Manual" (ISBN 9781588502506) is recommended. It contains 42 service sheets (150 pages) that cover the 1948 to 1966 rigid, spring frame, swing arm D1, D3, D5 and D7 Bantam. However, as the prior year D7 was effectively identical to the 1966-1967 D10 Silver and Supreme models this manual will be of use to owners of those models also. The reader may also find "The Book of the BSA Bantam" (ISBN 9781588502100) useful as it covers all Bantam models from 1948 to 1971. It should be noted that BSA model years ran from August through July. For example, the 1968 models were released in August 1967, the 1969 models in August 1968 etc. VelocPress.com has been publishing reprints of motorcycle and automobile manuals since 2003 and our publications have earned excellent reviews worldwide so you can be assured you are purchasing a quality product. We encourage you to exercise caution when purchasing a manual for your motorcycle as many of the reprints found on internet websites are from "bedroom sellers" at enticingly low prices by individuals that really have no idea what they are selling. Many are nothing more than poor quality comb-bound photocopies that are scanned and printed complete with greasy pages and thumbprints and, as such, are deceptively described as "pre-owned," used "or even 'refurbished'!" In addition, they are often advertised for the incorrect series and/or model years of motorcycles.

Jonang: The One Hundred and Eight Teaching Manuals Oct 08 2020 Jamgön Kongtrül Lodrö Taye presents practical teachings from a variety of Tibetan Buddhist traditions in this volume of The Treasury of Precious Instructions. The Treasury of Precious Instructions by Jamgön Kongtrül Lodrö Taye, one of Tibet's greatest Buddhist masters, is a shining jewel of Tibetan literature, presenting essential teachings from the entire spectrum of practice lineages that existed in Tibet. In its eighteen volumes, Kongtrül brings together some of the most important texts on key topics of Buddhist thought and practice as well as authoring significant new sections of his own. In this, the eighteenth volume, Kongtrül expands on The One Hundred and Eight Guidebooks, a collection of teaching manuals compiled by the sixteenth-century Tibetan master Kunga Drolchok, adding Indoc source texts, Tibetan antecedents, and later interpretations. Though compiled by a Jonangpa abbot and transmitted by the Jonang tradition, these teaching manuals are actually drawn from the Kadam, Sakya, Kagyu, and, to a lesser extent, Nyingma traditions. They are succinct and impart practical wisdom, as transmitted by key figures like Kunga Chogdrub and Lowo Khenchen Sonam Lhundrub. Gyurme Dorje, the translator, provides extensive notes and helpful context throughout. The resulting volume preserves and integrates the diverse lineages of Tibetan Buddhism while providing useful advice to practitioners.

Industrial Parsing of Software Manuals Jun 23 2019 The task of language engineering is to develop the technology for building computer systems which can perform useful linguistic tasks such as machine assisted translation, text retrieval, message classification and document summarisation. Such systems often require the use of a parser which can extract specific types of grammatical data from pre-defined classes of input text. There are many parsers already available for use in language engineering systems. However, many different linguistic formalisms and parsing algorithms are employed. Grammatical coverage varies, as does the nature of the syntactic information extracted. Direct comparison between systems is difficult because each is likely to have been evaluated using different test criteria. In this volume, eight different parsers are applied to the same task, that of analysing a set of sentences derived from software instruction manuals. Each parser is presented in a separate chapter. Evaluation of performance is carried out using a standard set of criteria with the results being presented in a set of tables which have the same format for each system. Three additional chapters provide further analysis of the results as well as discussing possible approaches to the standardisation of parse tree data. Five parse trees are provided for each system in an appendix, allowing further direct comparison between systems by the reader. The book will be of interest to students, researchers and practitioners in the areas of computational linguistics, computer science, information retrieval, language engineering, linguistics and machine assisted translation.

BOOK OF THE BSA SUNBEAM & TRIUMPH TIGRESS 175cc & 250cc SCOOTERS 1959 To 1965 Jul 05 2020 110 pages, and 70 illustrations and charts, size 5.5x8.5 inches. This publication covers all three variations of the BSA Sunbeam and Triumph Tigress 175cc two-stroke and the 250cc four-stroke and electric start models manufactured from 1959 to 1965. Originally published under the same title in 1967 as a corrected version of the previous 1963 edition by J. Thorpe, this book is one of The Motorcyclist's Library series published in the USA by Floyd Clymer by arrangement with the original publishers, Pitman Ltd. of London, England. **MANUALS & TECHNICAL PUBLICATIONS:** Neither BSA nor Triumph ever published a workshop manual for these models, however, those owners interested in acquiring additional technical information are directed to our publication ISBN 9781588502537 which includes a compilation of the 3 major factory manuals identified below. The combination of these three publications provides the most comprehensive maintenance and repair information that was ever made available from the manufacturer. Maintenance, repair and service information was issued under both the BSA and Triumph name. However, as the machines were identical in all aspects, any technical documentation can be applied to either manufacturer without hesitation. **SERVICE SHEETS:** Beginning in December 1959, both BSA and Triumph began publishing repair, overhaul and technical information in the form of individual (dealer only)

'Service Sheets'. It should be noted that it was never intended that these service sheets would be distributed to the general public. However, they were eventually combined into a single publication and released under both the BSA and Triumph names, the contents being identical in either case. INSTRUCTION MANUAL: Both BSA and Triumph published an identical 'Instruction Manual' the only difference being the name on the front cover. These publications were somewhat more detailed than typical 'owner's manuals' as they included overhaul information in addition to general maintenance and adjustments. As these instruction manuals were included with each new scooter purchased, there were a number of 'editions' published during the lifetime of the model, however, the contents remained basically unchanged. When combined with the 'Service Sheets' they are a reasonable substitute for a workshop manual. PARTS (or) SPARES MANUAL: The parts manuals are also identical and include exploded component diagrams that are extremely helpful in the rebuilding or restoration process. DESIGN & GENERAL SPECIFICATIONS: Designed by Edward Turner (Triumph) and sold under both BSA and Triumph brand names to take advantage of established distribution networks, this badge engineering was one of the last uses of the Sunbeam name. The differences between the BSA Sunbeam and Triumph Tigress were entirely cosmetic - the former in polychromatic green paint, also two-tone red and cream, with a BSA badge; the latter in a shell blue or mimosa and ivory (two-tone) with a Triumph badge. Introduced in late 1959, the scooter was available with a 250cc four-stroke twin (10 hp), or 175 cc two-stroke single cylinder engine (7.5 hp). Both engines were forced-air-cooled. The two-stroke was a development of the BSA Bantam engine but the four-stroke was a completely new parallel-twin with a gear drive to the gearbox. The contact-breaker fed two separate ignition coils, each of which connected directly to its own spark plug without the need for a distributor. Drive to the rear wheel was by a fully enclosed chain in an oil bath. Both versions had four, foot-operated gears. Some of the 250 twins were fitted with an electric starter and a 12 volt (not 6 volt) electrical system, they were identified as either B2S (Sunbeam) or TW2S (Triumph). The 250cc four-stroke model was discontinued in 1964 and the 175cc two-stroke model in 1965.

Writing and Designing Manuals and Warnings 4e Feb 09 2021 Twenty-five years ago, how many people were thinking about the internet on a daily basis? Now you can find everything, including technical and instruction manuals, online. But some things never change. Users still need instructions and warnings to guide them in the safe and proper use of products. Good design, clear instructions and warnings, placement of graphics, all the traditional elements hold true whether designing for print or online materials. And technical writers still need those two most valuable commodities--time and information--to do their jobs well. Another constant, Writing and Designing Manuals and Warnings, now in its fourth edition, offers real-world guidance based on real-world know-how for the development of product documentation. See What's New in the Fourth Edition: New organization to clarify the principles of manual and warning development Coverage of the digital revolution and the global marketplace Expanded section on product safety and warnings Information on international standards for warnings Backed by Research and Collective Experience Drawn from the collective experience of hundreds of technical writers, graphic artists, and product safety engineers, along with the author's nearly 30 years of experience helping companies improve instructions and warnings, this how-to book covers every aspect of developing state-of-the-art product manuals and safety warnings. Filled with examples that show how good manuals and effective warnings can add value to your company's products and build repeat business, while at the same time reducing liability exposure, the text demonstrates how to create manuals that give products a competitive edge and improve customer satisfaction. Solidly grounded in research, but not a stuffy academic treatise, this down-to-earth, practical book is a survival guide for writers in the real world of short deadlines and tight budgets.

The Artist's Assistant Aug 30 2022 As Leslie Carlyle points out in The Artist's Assistant: Oil Painting Instruction Manuals and Handbooks in Britain 1800-1900 with Reference to Selected Eighteenth-Century Sources (a revised and expanded edition of her doctoral dissertation), the exchange and transmission of information among artists on the technical aspects of their calling have been carried on through mostly an "oral tradition," with some further enlightenment provided through artists' diaries, letters, and the occasional published article. In the nineteenth century in England, however, a remarkable number of books and pamphlets having to do with oil painting were published, following on the heels of a large body of work published in the previous century. This book contains remarkable scholarship of the highest order. It provides a wealth of information about the development of English oil painting in an accessible and readable way, and each chapter concludes with an extensive list of notes and references. Its story, to me at least, reveals that two hundred years ago artists and manufacturers were dealing thoughtfully and thoroughly with their materials. This is a reference that should be in every art-history library. It will prove an especially valuable resource for conservators who do research in order to treat nineteenth-century English paintings. --Publisher description.

Successful Technical Writing Apr 01 2020 Excerpt from Successful Technical Writing: Technical Articles, Papers, Reports, Instruction and Training Manuals, and Books Engineers and scientists write more today than ever before in history. Almost every technical job requires some kind of writing from the formal report of the results of a research project to the preparation of an instruction manual or technical book. And more and more firms are urging their engineers to write magazine articles and technical papers for publication. What about these men who must prepare material for publication? Does writing come easy to them - do they obtain maximum output during the time they write? Talk to engineers and scientists and you'll find the answer to both these questions usually is no. This is unfortunate because the writing burden of engineers and scientists is increasing and will continue to increase as long as technology moves forward. Many solutions to the problem of the increased writing burden are used. Some firms hire huge technical-writing staffs - others farm their writing out to job shops specializing in this work. Advertising agencies form public relations departments to write articles, news, and equipment releases. Hundreds of public relations firms doing little more than technical writing have been spawned in recent years. But none of these completely relieve the individual engineer and scientist of his obligation to write for the advancement of his field and personal career. In writing for publication, every technically trained man faces the familiar problems writers have tried to solve for hundreds of years - where to get ideas, how to develop them into publishable form, how to outline the writing task, and how to get the job done.
